

Below are pictures of the progress on the construction at DeShazo Elementary and Muleshoe High School. It is exciting to see the facilities taking shape. The first picture is of the new hallway at DeShazo Elementary. We are getting pretty close to substantial completion for this addition, except for the exterior brick. We are still working on securing a brick that will look good on the extension.

The second picture is of the west side of the new high school gym. You can see the EFIS material being applied to the high wall sections of the gym. This is the same material we applied to the high wall area of the cafeteria at Dillman Elementary. It looks very good. The exterior walls of the east side of the high school are also going up. This is the area that will include the math classroom hallway, principal offices, and library.
